

GONÇALO TEIXEIRA

Msc student in Electrical and Computer Engineering

+351 925 125 427 – goncalo.d.teixeira@tecnico.ulisboa.pt – <https://www.linkedin.com/in/goncalodteixeira/>

Final-year Electrical and Computer Engineering Master's student at Instituto Superior Técnico ([IST](#)), specializing in Control, Robotics, and Artificial Intelligence. Currently developing my thesis on the '[AI Packbot](#)' project at the Institute for Systems and Robotics ([ISR](#)). I am seeking a summer internship to gain knowledge and practical industry experience while delivering meaningful value to the company. With my thesis scheduled for completion by October/November, I am targeting January 2027 to transition into my first full-time professional role."

VOLUNTEER EXPERIENCE

"IPDJ" for "FPF",
(Nov. 2023, Euro 2024)
Preparation – Portugal vs Scotland ([Certificate](#))

Web Summit
(Nov. 2023)
([Certificate](#))

"Banco Alimentar Contra a Fome"
(2010 – 2016)
Regular Volunteer, during my Scouts journey

EXPERTISE

Programming:

- Python (Machine Learning & Robotics)
- C (Systems Programming, Algorithms, Data Structures)
- MATLAB (Signal Processing & Control)

Tools & Systems:

- [ROS](#)
- Linux (Ubuntu)

SOFT SKILLS AND STRENGTHS

- Adaptability ([ISR](#), [PSEM](#), [Robothink](#))
- Communication ([ISR](#), [JEEC](#), [PSEM](#), [Robothink](#), Volunteer Experience)
- Continuous Learning and Problem Solving ([ISR](#), [PSEM](#))
- Teamwork ([PSEM](#))

LANGUAGES

- Portuguese – Native
- English – Intermediate

EDUCATION

MSc & BSc in Electrical and Computer Engineering | ([IST](#))

(September 2021 - Present)

MSc and BSc in Electrical and Computer Engineering at [IST](#) (Core area: Control, Robotics, and AI; Secondary area: Circuits and Electronic Systems). Currently developing my thesis within the '[AI Packbot](#)' project: an AI-driven decision model for optimal object placement based on spatial states and semantic constraints (e.g., keeping chemicals away from edibles, protecting fragile items), integrated with automated robotic manipulation for pick-and-place tasks. Completed BSc with a final project titled 'Smart Grid Optimization through V2G System and Blockchain Transactions', where I developed the website and user interface for a system that utilized Machine Learning predictive models and blockchain technology to solve grid stability challenges and optimize decentralized energy markets.

EXTRACURRICULAR ACTIVITIES

Researcher and Master's student | [ISR](#) ([VISLab](#))

(August 2024 - Present)

Initially joined the [VISLab](#) research group at the Institute for Systems and Robotics ([ISR](#)), focusing on practical robotic manipulation for pick-and-place tasks using the [Baxter](#) robot and [ROS](#) ([Video Demo](#)), contributing directly to the published article 'HERB: Human-augmented Efficient Reinforcement learning for Bin-packing' [[article](#)]. Leveraging this experience, I advanced the project into my Master's thesis, shifting the core focus towards Artificial Intelligence and Machine Learning models for efficient object packing.

[Robothink](#) | Robotics and Programming Instructor

(October 2024 - Present)

Robotics and programming instructor at [RoboThink](#) guiding children and teenagers through practical, project-based STEM classes. I am responsible for teaching foundational concepts of electronics, mechanical hardware assembly, logic, and programming. My role involves leading students in building functional robots, providing technical support to troubleshoot hardware and software issues, and adapting technical content to ensure concepts are easily understood and projects are successfully executed.

[PSEM](#) (Mobile Energy Sustainability Project) | Electronics Team

December 2023 - March 2025)

Member of the Electronics team at [PSEM](#), a project focused on building highly efficient, sustainable electric vehicles to compete internationally. My core responsibilities included designing custom PCBs, 3D CAD modeling, and microcontroller programming. In 2024, I represented the team at the Greenpower Challenge in Goodwood (UK), where I gained hands-on experience troubleshooting real-time electrical failures under high-pressure race conditions. [[Certificate](#) | [Goodwood 2024 Video](#)]

[JEEC](#) | Partnerships Team

May 2022 - March 2023

Member of the Partnerships team for [JEEC](#) (Electrical and Computer Engineering Journeys), a job fair connecting dozens of tech companies with thousands of students. Responsible for corporate outreach and B2B networking, successfully negotiating and securing sponsorships and industry speakers for the 2023 edition.
